WHAT WE DELIVER

Job planning portals

Your contractors, agencies, and field teams work from one system. No more email chains, missed updates, or conflicting schedules.

Field reporting systems

Your project managers see accurate site status in real time. No more paper-based updates or end-of-day reports that are already outdated.

Material tracking platforms

Your materials are ordered, tracked, and accounted for in one place. Less waste, fewer surprises, tighter cost control.

IoT quality monitoring

Your building materials are monitored for environmental defects before they leave production. Fewer returns, fewer complaints on site.

Contractor coordination tools

Your subcontractors and internal teams stay aligned on scope, timelines, and approvals. No overhead of constant manual coordination.

Data & analytics

Your project data turns into decisions. Cost trends, approval bottlenecks, and performance patterns visible in one dashboard.

CLIENT CASES

Road Works Job Planning Portal

 United States

A Nordic infrastructure operator needed to unify fragmented scheduling across manufacturers, installers, and agencies. We built a centralized portal with coordinated scheduling and real-time field reporting for all teams.

25%

Faster scheduling & approvals

50%

Reduction in material waste

IoT Sensor Kit for Environmental Monitoring

 United States

A US roofing manufacturer needed to prevent product damage from undetected temperature and humidity swings. We built a real-time IoT monitoring system with sensors, IR heat-map camera, cloud analytics, and a live dashboard.

33%

Reduction in product defects

40%

Fewer manual checks
